

# Metrics to Support Agroecological TRANSITIONS:

A meta-framework and database to support diverse metrics users in their journey towards holisticity

2024-12-17

**Tools to Develop Holistic Performance Assessments** 

#### **Systematic Review**

A systematic review of available metrics and existing assessments.

To what extent do current assessments and metrics capture the **holistic performance** of agri-food systems?

#### **Meta-framework**

A meta-framework and guidelines for developing holistic assessments, presenting design principles and steps.

How can we **navigate the jungle** of existing frameworks and metrics?

#### **Metrics Library**

A one-stop shop for metrics, where users can view, explore and select the right metrics for their needs.

What do you want to understand?
What are your practical constraints?
What is your context?

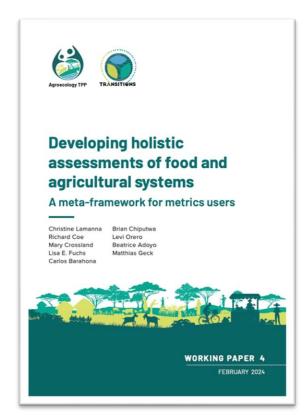

### The Metaframework

Build your own holistic assessment!

#### THE DESTINATION

Holistic assessment of agri-food systems

THE COMPASS
Assessment design principles

#### THE LANDSCAPE

Assessment system elements

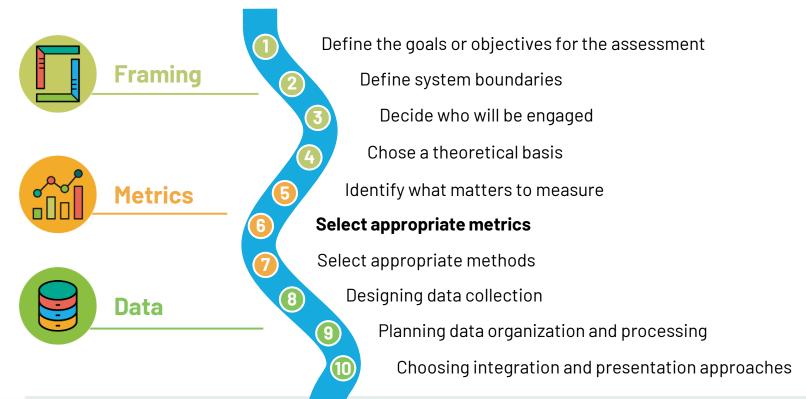

#### THE PATH

Steps to take to design an assessment system

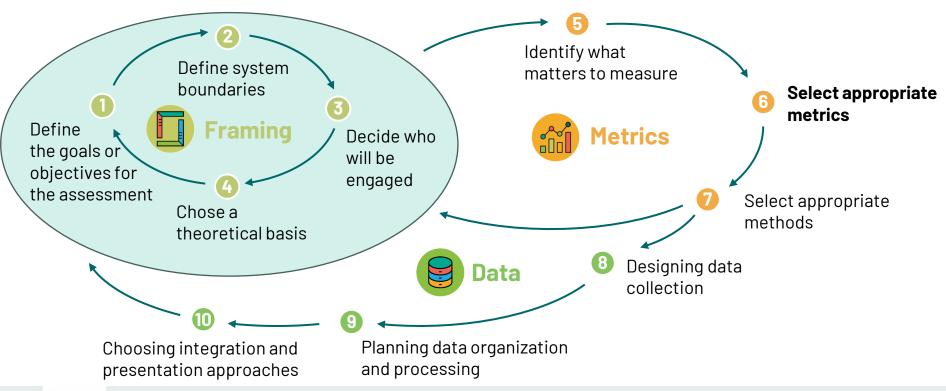

# The Path – Steps to take to design an assessment system

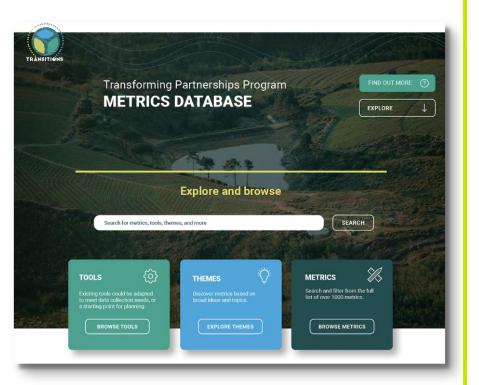

## The Path(s) – Steps to take to design an assessment system

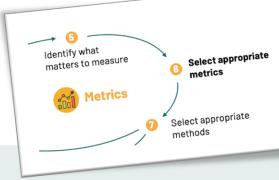

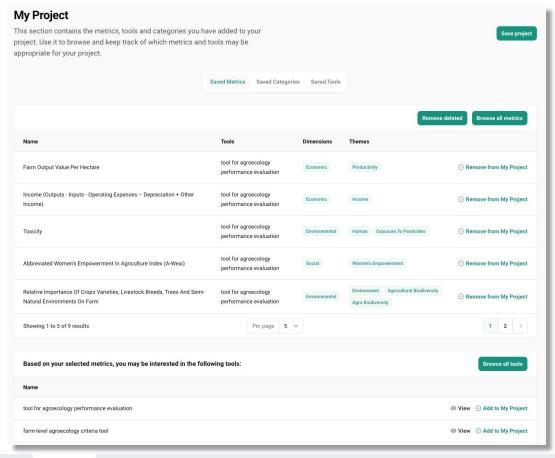

# **Metrics Database and Library**

A one-stop shop for metrics, where users can view, explore and select the right metrics for their needs.

- What do you want to **understand**?
- What are your **practical constraints**?
- What is your **context**?

# Database Features to support users and the wider AE community

- Users can select metrics, themes, categories and save to a "my project" section.
  - Based on your selected items, the system can suggest complimentary metrics or tools that might be appropriate.
- Also have an "admin panel" a tool to enable collaboration on the data curation.
  - First workshop to explore the database conducted at ICRAF in Nov 2024.

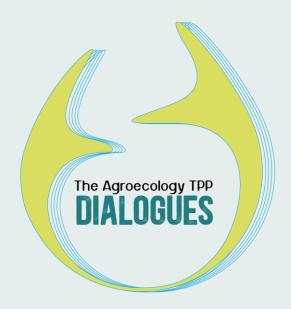

### What have we learnt? What's Next?

- There is more information out there about measuring 'performance' than we thought, and it is harder to find!
  - +ve the Library is potentially more useful than we thought!
  - -ve the Library is harder to populate and curate than we thought...
- There are many different paths to designing a good, holistic performance assessment, but there are common steps on all those paths.
- There are plenty of wheels, so don't invent one from nothing! But there are also plenty of different roads, so when you find a good wheel: Test, review and adapt it to yours.

In 2025: Meta-framework updates and Library roll-out

#### Check out the working paper on the Meta-framework here:

https://www.cifor-icraf.org/knowledge/publication/9081/

Look out for links to explore the library in early 2025!
